OBJECTIVE

A passionate Computer Science Engineering student with strong **problem-solving skills in C++ and Python**, and hands-on experience in **MERN stack development**. Eager to contribute to real-world projects, enhance technical skills, and grow as a full-stack developer in a dynamic and challenging environment.

EDUCATION

Amrita Vishwa Vidyapeetham **2023 – 2027**

*B.Tech - Computer Science and Engineering - **CGPA – 9.08/10*** *Coimbatore, Tamil Nadu*

EXPERIENCE

Research Scholar – Data Analyst Research **Aug-2024 to Apr-2025**

Analyzed forest and tree types across India to study their CO2 sequestration potential. Used Matplotlib, Seaborn, and Tableau for data visualization to observe trends and patterns. Recommended suitable tree species for specific regions to maximize CO2 absorption and support sustainable forest management.

TECHNICAL SKILLS

Programming Languages: Python, C++,Java, C

Web Development: HTML, CSS, Bootstrap, JavaScript, React, Node JS, Express, EJS, REST APIs, MySQL, MongoDB, Redux Toolkit

Libraries: Numpy, Pandas, Matplotlib, Seaborn, Tableau

Tools/Technologies: Eclipse, VS Code, Git, GitHub

Academic Coursework: DSA, DBMS, OOPS, OS , Networks

PROJECTS

WanderLust-Full-Stack Travel Platform | GitHub

Designed and developed a full-stack web application for travel listing, browsing, and interactive map exploration.

- Implemented secure authentication and authorization using Passport.js with session and cookie-based user management.
- Developed scalable RESTful APIs using Node.js and Express.js following MVC architecture with robust middleware and routing.
- Integrated MongoDB with schema validations, database relationships, and handled errors with flash messaging for improved UX.
- Integrated Cloudinary for image storage and Mapbox for interactive maps with geocoding.

Tech: HTML5, CSS3, Bootstrap5, JavaScript, Node.js, Express.js, MongoDB, EJS, REST API, Git

City-Based Weather Information System | GitHub

Developed a responsive React application to display real-time weather data for user-entered cities.

- Integrated a Weather API with input validation and error handling for accurate results.
- Built a clean UI using React Hooks and component-based architecture.

Tech: React.js, JavaScript, Weather API, HTML5, CSS3

Disaster Response System | GitHub

Designed and developed a disaster management system using core data structures for optimized emergency handling.

- Utilized Graphs, AVL Trees, BST, Heaps, and Hashmaps for route planning, resource allocation, and priority-based response.Included features like optimal pathfinding and historical data tracking for decision support.

Tech: Python, Data Structures and Algorithms.

CERTIFICATIONS

- **MERN** Stack Development – **Apna College**
